</tbody>
</table>
The model TZEMT400AB32MAA thermostat provides typical thermostat control of a central heating and cooling HVAC system. This thermostat also features a Z-Wave™ module for remote control.

Normally, the thermostat displays the thermostat control screen as shown above.

## Thermostat Control Screen Function Control Buttons

### Button | Description
--- | ---
Menu | Other thermostat menus can be accessed by pressing the **MENU** button.
System Mode | Used to change the system mode:
  - Off: System off
  - Heating: Heating only on
  - Cooling: Cooling only on
  - Auto: Heating/Cooling on as necessary
Fan Mode | Used to change the fan mode:
  - Auto: Fan on when cooling/heating is necessary
  - On: Fan constantly on
Schedule Mode | Used to change the schedule mode:
  - Hold: System maintains the current temperature setpoints. Schedules are disregarded.
  - Run: Run the system schedule (or Z-Wave controlled schedule)
  - Energy Saving Mode: Temperature setpoints in ESM Setpoints are maintained. See *ESM Setpoints* on page 15 for more information.
Minimized Display Mode
Optionally, you can set the thermostat to show only the temperature in minimized display mode. This mode can be enabled or disabled in the Users Settings screen.

See Screen Timeout on page 10 for more information.
Menu Map

The menus are accessed by pressing the **MENU** button on the main screen.

- **“User Settings”**
  - Set Clock
  - Filter Service
  - Maint Service
  - Screen Timeout

User Settings

Set Clock
The Set Clock screen allows you to set the thermostat’s internal clock.

⇒ If the clock has been reset by an extended power outage, the clock display on the thermostat screen will blink. Press the MENU button to go directly to the Set Clock screen.

Set the Clock
1. Press the MENU button.
2. Scroll to User Settings and press the Select button.
3. Scroll to Set Clock and press the Select button.
4. Scroll to the item you want to change (hour, minute, day part, month, day, year, day of week).
5. Press the plus (+) or minus (−) buttons to adjust the item.
6. Press the Set button to save the changes.
Filter Service

The Filter Service screen will show the accumulated Filter Runtime hours as well as the Service Interval that will be used to trigger a Filter Message. Any type of HVAC operation that causes the HVAC system fan to run will cause the Filter Runtime value to increase.

When the Runtime hours equals the Service Interval hours, the Red LED will flash along with a “Filter” message to remind you to replace the filter. Once the filter has been replaced, press the Reset button to reset the Filter Runtime value to zero.

View/Reset Filter Runtime
1. Press the MENU button.
2. Scroll to User Settings and press the Select button.
3. Scroll to Filter Service and press the Select button. The Filter Runtime is displayed in hours.
4. To reset the Filter Runtime counter, press the Reset button.
   ➔ The Filter Runtime counter should be reset each time the filter is changed.

Change the Filter Service Interval
1. Press the MENU button.
2. Scroll to User Settings and press the Select button.
3. Scroll to Filter Service and press the Select button.
4. Press the plus (+) or minus (-) buttons to adjust the service interval.
   ➔ The service interval can be set between 100 and 4000 hours in 100 hour increments.

Disable the Filter Service Interval
When the filter service interval is disabled, the runtime counter will continue to count the runtime, but the filter service indicator will never be displayed.

1. Press the MENU button.
2. Scroll to User Settings and press the Select button.
3. Scroll to Filter Service and press the Select button.
4. Press the minus (-) button until Disabled is displayed.
Maint Service
The Maintenance Service screen shows the accumulated Heat and Cool Runtime hours as well as the Service Interval that will be used to trigger a Maintenance Message. Any HEAT or COOL type of HVAC operation will cause the respective Runtime values to increase.

When the combined HEAT and COOL Runtime hours equals the Service Interval hours, the Red LED will flash along with a “Maint” message to remind you your HVAC system may require periodic maintenance. Press the Menu button to enter the Filter Service screen. The Reset button can be pressed and the HEAT and COOL Runtime values will be reset to zero.

Change the Maintenance Service Interval
1. Press the MENU button.
2. Scroll to User Settings and press the Select button.
3. Scroll to Maint Service and press the Select button.
4. Press the plus (+) or minus (−) buttons to adjust the service interval.
   ➔ The service interval can be set between 200 and 4000 hours in 100 hour increments.

Disable the Maintenance Service Interval
When the maintenance service interval is disabled, the runtime counter will continue to count the runtime, but the maintenance service indicator will never be displayed.

1. Press the MENU button.
2. Scroll to User Settings and press the Select button.
3. Scroll to Maint Service and press the Select button.
4. Press the minus (−) button until Disabled is displayed
Screen Timeout
This is the time before any screen reverts to the Minimized Screen (temperature display only), after you stop pushing buttons. Minimized Screen feature is disabled by setting this time to “0”.

Change the Screen Timeout
1. Press the MENU button.
2. Scroll to User Settings and press the Select button.
3. Scroll to Screen Timeout
4. Press the plus (+) or minus (-) buttons to adjust the time (in seconds).
   ➔ The screen time-out can be set between 0 and 120 seconds. Zero (0) is the default setting. When set to Zero (0), the minimized screen feature is disabled.

Disable the Minimized Display
1. Press the MENU button.
2. Scroll to User Settings and press the Select button.
3. Scroll to Screen Timeout
4. Press the minus (-) button until zero (0) is displayed.
F/C Settings

The F/C Settings screen is used to select the temperature display mode. Fahrenheit (F) or Celsius (C) are the two available modes.

Change the Temperature Mode

1. Press the MENU button.
2. Scroll to User Settings and press the Select button.
3. Scroll to F/C Settings and press the Select button.
4. Press the plus (+) or minus (-) buttons to change the temperature mode. Select F for Fahrenheit or C for Celsius.
Sensor Calibration
The Sensor Calibration screen is used to change the temperature calibration of the internal temperature sensor. The temperature calibration can be changed by +/- 7 degrees.

When the Sensor Calibration screen is selected, the current temperature calibration is displayed. In the example screen, the calibrated temperature is 77 and the number of degrees of offset being applied is 1.

Change the Sensor Calibration
1. Press the **MENU** button.
2. Scroll to **User Settings** and press the **Select** button.
3. Scroll to **Sensor Calibration** and press the **Select** button.
4. Press the plus (+) or minus (-) buttons to change the sensor calibration.

⇒ After this screen is closed, it may take a few seconds for the temperature displayed on the main thermostat screen to update to the new temperature.
Backlite/Display
The Backlite/Display screen is used to set the backlight time-out and contrast.

Backlite Timeout is the time (in seconds) from the last button press to the backlight going out. The time-out can be set between zero (0) and one hundred and twenty (120) seconds. Thirty (30) is the default setting. When set to zero (0), the backlight will remain always on.

Contrast sets the contrast level of the LCD display. The contrast can be set between zero (0) and twenty (20). Ten (10) is the default setting. If the display is too light, use a higher number. If dark lines appear in the display, use a lower number.

Adjust the Backlight
1. Press the MENU button.
2. Scroll to User Settings and press the Select button.
3. Scroll to Backlite/Display and press the Select button.
4. Scroll to Backlite Timeout.
5. Press the plus (+) or minus (-) buttons to change the number of seconds.

⇒ The backlight time-out can be set between 0 and 120 seconds. Thirty (30) is the default setting. When set to Zero (0), the backlight will remain always on.

Adjust the Contrast
1. Press the MENU button.
2. Scroll to User Settings and press the Select button.
3. Scroll to Backlite/Display and press the Select button.
4. Scroll to Contrast.
5. Press the plus (+) or minus (-) buttons to change the contrast value.

⇒ The contrast can be set between 0 and 20. Ten (10) is the default setting.
The Usage Graph shows daily heating and cooling runtime hours for a week.

The button in the lower right corner will change depending on what is being displayed. When the heating time is displayed, the button will read **Cool**. When the cooling time is displayed, the button will read **Heat**. Press the **Heat/Cool** button to display the heating/cooling time.
ESM Setpoints

Energy Saving Mode (ESM) Setpoints are the setpoints used when the Energy Saving Mode schedule is selected in the Schedule Mode screen.

Adjust ESM Setpoints
1. Press the MENU button.
2. Scroll to ESM Setpoints and press the Select button.
3. To adjust the heat setpoint, scroll to ESM - Heat. Press the plus (+) or minus (-) buttons to adjust the setpoint.
4. To adjust the cool setpoint, scroll to ESM - Cool. Press the plus (+) or minus (-) buttons to adjust the setpoint.
ZWave Install

Z-Wave™ controllers from various manufacturers may support the Z-Wave™ Thermostat General V2 Device class used by the Trane Z-Wave™ Thermostat. The following procedure will allow the thermostat to be added to a Z-Wave™ network.

➤ If you are using a controller that is not a Schlage bridge, consult the instructions that came with the controller to find out how to enroll a new device.

Inclusion

1. Install a new, high-quality 9-volt battery into the bridge.
2. Hold the bridge within 6 feet (1.8 meters) of the thermostat throughout the entire inclusion process.
   ➤ After you begin the inclusion process, you have 30 seconds to complete the remainder of the steps. Study the steps below before beginning.
3. Press and release the plus (+) button on the bridge.
4. Press the MENU button on the thermostat.
5. Scroll to ZWave Install. Then press the Select button.
6. Press the Yes button.
7. Observe the lights on the bridge. The orange light will blink while enrollment is taking place. Enrollment is complete when the orange light becomes solid.

Exclusion

1. Install a new, high-quality 9-volt battery into the bridge.
2. Hold the bridge within 6 feet (1.8 meters) of the thermostat throughout the entire exclusion process.
   ➤ Note: After you begin the enrollment process, you have 30 seconds to complete the remainder of the steps. Study the steps below before beginning.
3. Press and release the minus (-) button on the bridge.
4. Press the MENU button on the thermostat.
5. Scroll down to Z-Wave Install and press the Select button.
6. Press the Yes button to exclude the thermostat.
7. Observe the lights on the bridge. The orange light will blink while exclusion is taking place. Exclusion is complete when the orange light becomes solid.

Inclusion and Exclusion

Inclusion or exclusion is started by putting the controller into add node or remove node state and performing the procedure outlined above. As part of the process, the thermostat sends a node information frame at normal power. Low power inclusion or low power exclusion is not possible.
The Thermostat Info screen displays information about the thermostat and the system the thermostat controls. This information will be helpful if you need to contact customer support.

### Item | Description
--- | ---
TZEMT400AB32 | Model Number
Ver: 01.00.10 | Firmware version

System Type: Standard | System type may be Standard or Heatpump
Fan Type: Gas | Fan type may be Gas or Elect (electric)
Installer Settings

The Installer Settings screen is a hidden screen designed for installer use only. Do not change any settings in this screen unless you are a qualified service technician.

Changing these settings will affect the operation of the heating/cooling system.

To view and edit these settings:

1. Press the MENU button.
2. Press and hold the two middle buttons simultaneously until the Installer Settings menu is displayed.
3. Scroll to the setting you want to change. Press the plus (+) or minus (-) button to adjust the setting.
4. Press the Done button when you are finished.

Schedules

Scheduling is usually controlled by your Z-Wave system. See the instructions that came with your Z-Wave system for more information. However, scheduling may also be controlled by the thermostat.

- The Schedules menu is hidden by default, but may be enabled in the Installer Settings. See Enable/Disable the Schedules Menu on page 21 for more information.

The thermostat has a 4 x 7 schedule, meaning the setpoints can be changed up to four times a day each day. Each day has a separate schedule. Schedules may be copied from one day to another day or group of days. See Copy a Day Schedule on page 23 for more information.

Enable/Disable the Schedules Menu

Because the Schedules menu is disabled by default, you must first enable it before any scheduling can be done at the thermostat. If you want to use your Z-Wave system for scheduling, scheduling must be disabled in the thermostat.

1. Press the MENU button.
2. Press and hold the two middle buttons simultaneously until the Installer Settings menu is displayed.
3. Scroll to Systems Settings and press the Select button.
4. Scroll to Sched Enable and press the plus (+) button to enable scheduling or the minus (-) button to disable scheduling.

- When scheduling is enabled in the thermostat, a Y will be displayed next to Sched Enable. When scheduling is disabled in the thermostat, an N will be displayed next to Sched Enable.
Load a Preset Schedule
There are two possible schedules that may be loaded: Preset Comfort and Preset Energy Star. These schedules may not be changed. When a schedule is loaded, it changes the current Heat and Cool schedule settings. You can then edit the Heat and Cool schedule, if necessary.

> Selecting Preset Comfort or Preset Energy Star schedules will overwrite the current Heat and Cool schedule.

1. Press the MENU button.
2. Scroll to Schedules and press the Select button.
3. Scroll to the schedule you want to load and press the Select button.
4. Press the Yes button.

<table>
<thead>
<tr>
<th>Preset Schedule</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Preset: Comfort</td>
<td>This is a preset schedule with mild setbacks, designed to maintain a comfortable temperature.</td>
</tr>
<tr>
<td>Preset: Energy Star</td>
<td>This is a preset schedule with deeper setbacks, designed to conserve energy.</td>
</tr>
</tbody>
</table>

View the Current Schedule
1. Press the MENU button.
2. Scroll to Schedules and press the Select button.
4. The schedule for the current day will be displayed. To view other days, press the Next button.

Set a Heat and Cool Schedule
1. Press the MENU button.
2. Scroll to Schedules and press the Select button.
4. The schedule for the current day will be displayed. To view other days, press the Next button.
5. To change a setting (hour, minute, day part, heat setpoint or cool setpoint), scroll to that setting using the left () or right () arrow buttons. Then press the plus (+) or minus (-) buttons as necessary.

> Continue pressing the left () or right () arrow buttons to move to the next line.
Schedules

Copy a Day Schedule
1. Press the MENU button.
2. Scroll to Schedules and press the Select button.
4. The day of the week is displayed at the top of the screen. Press the Next button until the day you want to copy is displayed.
5. Highlight the small c in the lower right corner by pressing the left arrow () button once. The Next button will change to Copy.
6. Press the Copy button.
7. For each day to which you want to copy the day schedule, change the N (no) to Y (yes). Use the left () or right () arrow buttons to scroll to the day and the use the Yes or No buttons on the side of the screen.
8. Press the Copy button.
For complete installation instructions, browse to part2.schlage.com and download Trane Thermostat Installation Instructions.
The LEDs on the thermostat may have several different meanings, depending on system, setup and operation.

Warranty

Trane Remote Energy Management Thermostat
Limited One (1)-Year Electronics and Mechanical Warranty

U.S.A. and Canada Only

Subject to the terms and conditions of this Limited One (1)-Year Electronics and Mechanical Warranty, Trane warrants that, if within one (1) year from Original Date of Purchase, the Purchased Product fails due to defect in manufacture, material or workmanship, Trane will provide a replacement for the Purchased Product or refund the Original Purchase Price, at its sole option, to the Original Purchaser occupying the premises in which the Purchased Product was originally installed. This warranty applies to the Original Purchaser only and is non-transferable. The one (1)-year limited warranty period begins from Original Date of Purchase, confirmed by sales receipt or other dated proof of purchase.

Exclusions: The following costs, expenses and damages are not covered by the terms and conditions of this One (1)-Year Limited Electronics and Mechanical Warranty: (i) labor and costs including, but not limited to, original initial installation, removal and reinstallation of Purchased Product; (ii) shipping and freight expenses for any required return of Purchased Product; (iii) failures, defects, or damages (including, but not limited to, any security failure or loss of data) caused by any third party product, service, or system connected or used in conjunction with the Purchased Product; and (iv) any other incidental, consequential, indirect, special and/or punitive damages, whether based on contract, warranty (express or implied), tort (including, but not limited to, strict liability or negligence), patent infringement, or otherwise, even if advised of the possibility of such damages. Additionally, this limited warranty does not cover scratches, abrasions, or deterioration due to the use of paints, solvents or other chemicals.

Further, the terms and conditions of this One (1)-Year Limited Electronics and Mechanical Warranty do not apply to Purchased Product when: (1) used in common area applications (2) used for purposes for which it was not designed or intended; (3) subjected to alteration, modification, abuse, misuse, negligence or accident, improper storage, improper installation or maintenance or operation or unauthorized repair; (4) used in violation of written instructions provided for Purchased Product; (5) subjected to improper temperature, humidity or other environmental conditions; or (6) damaged as a result of acts of God.

This One (1)-Year Limited Electronics and Mechanical Warranty is the only express warranty Trane makes on this product. THE DURATION OF ANY IMPLIED WARRANTIES, INCLUDING THE WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE, IS HEREBY LIMITED TO THE ONE-YEAR DURATION OF THIS WARRANTY. IF THIS PURCHASED PRODUCT IS CONSIDERED A CONSUMER PRODUCT, SOME STATES DO NOT ALLOW THE EXCLUSION OR LIMITATION OF INCIDENTAL OR CONSEQUENTIAL DAMAGES, SO THIS LIMITATION MAY NOT APPLY TO YOU. REFER TO YOUR LOCAL LAWS FOR YOUR SPECIFIC RIGHTS UNDER THIS WARRANTY.

Additional items: Trane does not authorize any person to create for it any obligation or liability in connection with the Purchased Product. Trane’s maximum liability hereunder is limited to the Original Purchase Price of the Purchased Product. No action arising out of any claimed breach of this warranty by Trane may be brought by the Original Purchaser more than one (1) year after the cause of action has arisen.

If you have a claim under this warranty, please return the Purchased Product to place of purchase for replacement or refund of the Original Purchase Price in exchange for the return of the Purchased Product, including sales receipt or other dated proof of purchase. Contact Schlage Customer Service at 877-288-7707 in U.S.A. and Canada for assistance with set-up and installation, or questions regarding your warranty claim.
