

Smart Home Software for Linux, Windows & Raspberry Pi Computers

Overview

Reliable & Fast Locally Processed Automation

HS4 processes your automations locally, ensuring the highest level of reliability and performance. You won't experience the "delays" that are common with Internet-reliant solutions like typical smart home hubs.

Safe & Secure

HS4 is designed to store all your sensitive information right there at home, never in the cloud. This helps to prevent hackers and prying eyes from seeing your personal data and custom home automation schedules.

Internet-Independent

Our MyHS web service simplifies the process of controlling your home remotely but is not required to automate your home. Your HS4 installation will continue to control your home 24/7, even when the internet is down or there's a web service outage.

Works with (Nearly) Everything

HS4 is designed to work with thousands of products using most popular smart home technologies. With HomeSeer, your imagination is your only limitation!

Amazon Alexa / Google Home / IFTTT

Leverage the latest technology with your HomeSeer-powered home! Use smart speakers from Amazon and Google to control your home by voice and create IFTTT 'applets' that integrate with hundreds of web products, apps and services from around the world!

Features

- Controls Light Switches, Thermostats, Door Locks, Garage Doors, Water Valves, Energy Monitors, Environmental Sensors, Cameras and More
